

Clippership®

Multi-Carrier Shipping System

Enables users to achieve new levels of shipping automation, easily, efficiently and cost-effectively

Clippership® provides the most advanced method of shipping parcels in the industry. It automatically calculates rating information and minimizes data entry. Tasks are easily performed in this state-of-the-art, Windows™, LAN application. Clippership gives shipping and mailroom staff a quick and easy way to create carrier compliant labels, rate shop multiple carriers, create useful management reports, support alternate discount carrier rates and print required carrier documentation.

Integration of Clippership provided by Intelligent Business Systems, LLC with your accounting, WMS or ERP system eliminates manual data entry of shipping information and provides real-time data for enhanced customer service.

Features

Multi-Carrier Compliance: Automate shipping for all carriers. Enjoy the benefits of full carrier compliance, including compliance labeling, reporting and electronic manifesting.

Rate Shopping: To get the best carrier rates and services, you need to shop around. Clippership provides you with all the information you need to get the best shipping rate for every package you ship.

LTL/Generic Carriers: Clippership replaces independent Less Than Truckload (LTL) software programs with one system that automates them all. Maintain one database for all shipments, one consignee list, and one history file. Define carriers in addition to those already supported. Quickly add custom local, regional or LTL carriers.

Integration into other Applications: One of the most important aspects of a shipping system is the degree to which it can integrate into your larger information environment. Utilizing integration tools such as Kewill integrate or TracerX, Intelligent Business Systems, LLC can enable you to exchange information with virtually any other system to include order processing systems, warehouse management applications or browser-based rating systems.

Reporting: Clippership can help you turn raw shipping data into incredibly useful management information. Clippership produces carrier manifest reports, as well as a number of standard reports that can be used for analysis for analysis and charge-back purposes.

Alternate Rates: Calculate and compare alternate rates based on criteria such as negotiated and retail rates. This feature is useful for determining potential markups.

Printing Solutions: Clippership supports forms and carrier-required documentation such as:

- Manifest reports
- Shipping, tracking and compliance labels
- Document labels for additional information
- Commercial Invoices
- Invoices
- Export Documents
- Custom Forms

Benefits

Support for all major carriers:

Airborne

BAX Global

DHL

FedEx Express

FedEx Ground

United States Postal Service

UPS Online® Compatible

- Clippership can shop for the “best” carrier based on cost, as well as on weight, zone, and zip code.

- Define rate tables manually or automatically
- Automatically print Bill of Lading forms and various shipping labels
- Rate shop among LTLs and non-LTLs including multiple classes within the same shipment
- Define rate tables for both domestic and international shipments
- Impose various discount methods on the rates

- Improve productivity by integrating new applications with corporate legacy systems
- Improve productivity by eliminating manual data entry into order entry systems
- Improve productivity with fast, trouble-free execution of business rules
- Improve reliability by leaving standard software applications intact

- Clippership’s report writer allows you to design your own reports, forms and queries. You get the kind of information you need to properly monitor shipping activity, analyze costs and identify future trends

- Stores alternate “retail” rates, while the manifest maintains the actual carriers charges.
- Provides data that can be used to generate expenses
- While designed for pack and ship operations, this module also provides value for sophisticated billing applications. For example, you may want to ship Next Day Air, but bill your customer for Ground freight

- Supports multiple types of printers including LaserJet
- Enables users to manage multiple documents through one central system
- Labels already configured to meet carrier specifications
